

At Total Water Treatment Systems Inc
 We Provide Comprehensive Solutions to
 Our Customers' Water Needs.

Relative Sizes of Particles Key

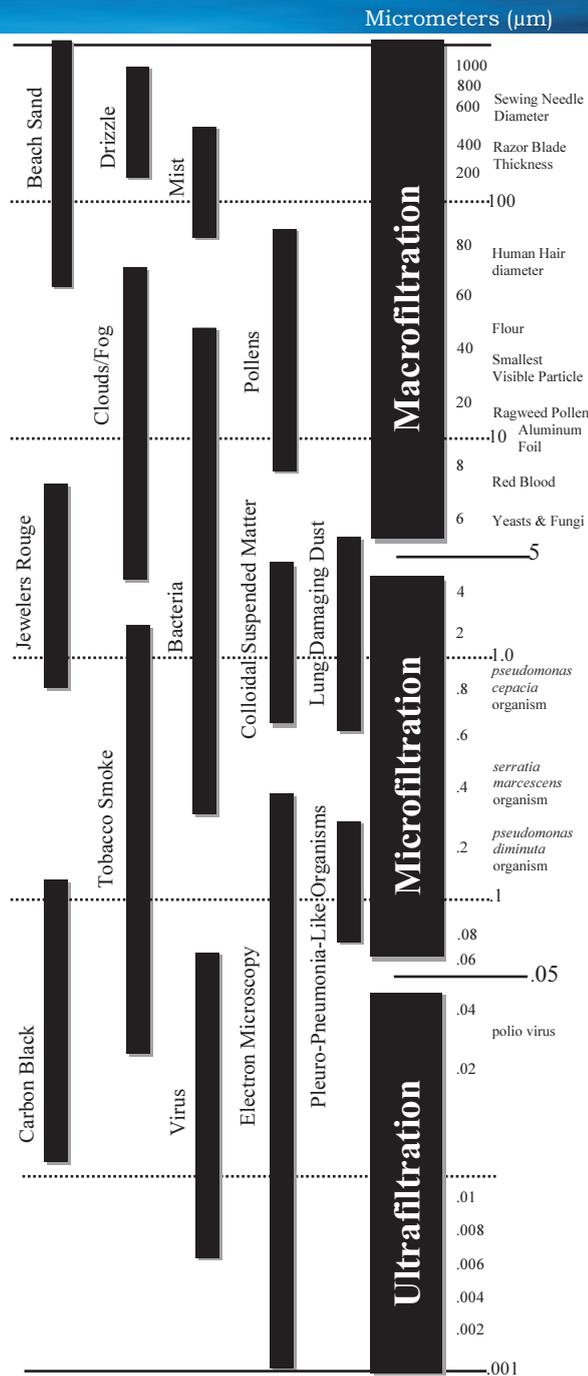

Total Water Treatment Systems Inc.

was founded over seventy years ago to offer commercial and industrial clients water purification systems that would fit their needs. Our company was built with service as its foundation. Today, we still maintain that every product is only as good as the people behind it. As an employee owned company, we support our service personnel by training them in the most up-to-date technologies in the industry. This enables them to efficiently meet the changing needs of our customers.

We can select from a wide range of manufacturers and suppliers. As your complete water resource, you can concentrate on your business.

Total Water Treatment Systems offers system design and engineering, distribution design, system sanitizations and complete maintenance programs. Additional services include:

- ≈ Water-by-the-gallon or water-by-the-month agreements
- ≈ Portable exchange deionizers and carbon filters
- ≈ Reverse osmosis repair and maintenance
- ≈ Membrane replacement
- ≈ System upgrades and renovations
- ≈ Installation, start-up and operator training
- ≈ 510K medical device supplier
- ≈ Local services
- ≈ 24-hour emergency service
- ≈ Temporary and rental equipment

Services

Ultrapure Water
 Ultrapure water is required for medical, pharmaceutical, dialysis, laboratory, biotech and other industrial processes.

Process Water
 Water used in manufacturing and other industrial processes must be purified to reduce costs and control quality.

Laboratory Water
 Purified water is an essential resource in all laboratory environments. Water is often the major component in such diverse applications as buffer preparation and organ perfusion.

Biotech & Pharma
 Water quality, consistency and reliability are critical issues for biopharmaceutical research, bioproduction and drug discovery.

Hospital Water
 Purified water is a crucial resource in all medical and hospital applications such as hemodialysis, decontamination washers, clean sterilizer reuse and analyzer equipment.

Dialysis Water
 A patient's blood and dialysate are separated only by a thin semi-permeable membrane, making the quality of dialysis water and the dialysate critical.

Decontamination/Sterilizer Water Quality

- Conductivity..... Better than 200K
 - Reverse osmosis polished by deionized mixed bed resin tanks
- TOC No Standard
- Bacteria Minimum - no std
 - Ultraviolet light and 0.2-micron final filtration

Research Laboratory Standards

Type I Water

- 18.2 MΩ/cm @ 25° C
- TOC <10 PPB

Type II Water

- 5MΩ/cm @ 25° C
- TOC <30 PPB

Type III Water—Reverse Osmosis Water

AAMI Standards

Contaminant	AAMI Suggested Maximum Levels
Aluminum	0.010 mg/L
Antimony	0.006 mg/L
